

# FROM STRENGTH TO STRENGTH

## The Story Of ProbeLogic's Success

2016

Today, ProbeLogic has completed repairs on over 10,000 transducers extending their lifetime by years. The work we do has impacted hundreds of thousands of lives by ensuring the ultrasound scan has produced accurate results.

2012

Moved to our new home in Gidgegannup to allow us to grow and develop new technologies . This was the start of exponential growth.

2008

Started having a global presence, servicing Europe, Asia, Middle East and the United States. The notion of two out of three transducers previously thought to be faulty can actually be repaired catches on as we grow our staff to match demand.

2004

Two short years in, we started manufacturing our own test equipment. Furthering our capabilities in Ultrasound and began servicing Australia wide.

2002

Founded in 2002, probellogic was created to disrupt the current way of thinking around transducer care. Before this time, the only option when a transducer failed was to purchase a new one. Now, you can repair your probe from as little as 15% of a new one.
